# ARC-PROVENANCE-2026-08-24 | Version v1.3.0-exec | STATUS: FROZEN
## Chain-of-Title & System Verification Statement - Phase 7 Baseline
### Anchor: A-77-DELTA-SHIELD-LOCKED | Effective: Aug 24, 2026
```

ARCSTONE SYSTEMS PROVENANCE CHAIN-OF-TITLE & SYSTEM VERIFICATION STATEMENT

Doc Reference: ARC-PROVENANCE-2026-08-24
System Anchor: Master Substrate Phase 7 Hardware Baseline
Attestation Date: Aug 24, 2026, 02:15 AM CDT
Classification: PUBLIC DOWNSTREAM CORE
Master Target Hash: A-77-DELTA-SHIELD-LOCKED
Release Baseline Tag: v1.3.0-exec

1. GOVERNANCE DECLARATION & AUTHORITY SCOPE (PHASE 7 BASELINE)
This repository operates strictly within the Downstream Realization Layer (Tier 3) of the Arcstone development lifecycle. All software implementations, tracking manifests, and public artifacts contained herein are derivative executions governed by the Upstream Sovereign Core (Tier 1). In strict compliance with Section X (Epistemic Sovereignty and Operational Decoupling) of the core constitutional stack:

- Zero Founder Drag ($C_{ops} = 0$): This repository enforces a zero-meeting, zero-synchronous-maintenance baseline.
- Unidirectional Authority: Amendments, patches, and specification revisions flow exclusively from Upstream to Downstream (Upstream -> Downstream). Code within this tier never dictates core architecture.
- No Operational SLAs: Arcstone Adaptive Science Systems, Inc. provides no custom engineering, live debugging, or operational service level agreements for this downstream distribution.

2. CRYPTOGRAPHIC & INVARIANT VERIFICATION MATRIX (AMENDED PHASE 7 BASELINE)

Prior to public fireprop and release tagging, all staged elements are passed through local and distributed gate membranes. Outbound commits are structurally blocked unless they achieve a verified PASS audit against the following target parameters:

AUDIT PHASE | VALIDATION MECHANISM | INVARIANT TARGET | FAIL-CLOSED TRIGGER
 Gate 1: Lifecycle Arch. | validateLifecycleInvariants.ts | Three-Tier Domain Isolation | POSIX 30 (LEDGER_CORRUPTION)
 Gate 2: Temporal Lattice | clockDriftLattice.test.ts | $\tau_{override} \leq 11.99\text{ms}$ Microarchitectural Cap Floor | POSIX 40 (SECURITY_BREACH)
 Gate 3: Isolation Membrane | disclosureLeakage.test.ts | 4KB Buffer Cap ($S_{max} \leq 4096\text{B}$) / Sensitive Ingestion Traps | POSIX 40 (SECURITY_BREACH)

Critical Architectural Amendment Note:

The legacy 12.00ms-15.00ms stasis control window is completely deprecated and expunged from the active operational profile. In accordance with ADR-003-REV-03, any microarchitectural vector clock skew or processing trajectory exceeding 11.99ms (11,990 microseconds) forces an immediate Non-Maskable Interrupt (NMI), triggers a volatile register zeroization (volatile_purge_frame), and drops execution cleanly into a hard bare-metal circuit breaker lockout under POSIX 40.

3. INTELLECTUAL PROPERTY SHIELD & LICENSING SCOPE

Public distribution of this downstream source code under the Apache 2.0 or CC BY 4.0 licenses applies strictly to the operational files explicitly contained within this public repository scope.

This release confers ZERO authority, rights, or implied licenses over upstream proprietary patent applications (including U.S. Provisional Patent App Serial No. 63/980,937). Core constitutional specifications, internal control-plane matrices, and patent delta records remain firewalled, unalterable, and protected under sovereign title.

4. INSTITUTIONAL EXECUTION SEAL

The automated pre-push firewall layers have successfully parsed all structural components. No un-scrubbed identity markers, partition anomalies, or logic leakage profiles were detected. The repository baseline is verified as stable, compliant, and authorized for public release tracking.

[SYSTEM BLOCK LATCHED 100% FAIL-CLOSED INVARIANT CLOSURE SECURED]
