# ARC-LICENSE-SCOPE-2026 | Version v1.3.0-exec | STATUS: FROZEN
## Dual-Track Licensing Matrix & Sovereign Scope Definition
### Anchor: A-77-DELTA-SHIELD-LOCKED | Effective: Sep 02, 2026
```

OPERATIONAL LICENSING & IP BOUNDARY SPECIFICATION DUAL-TRACK LICENSING MATRIX & SOVEREIGN SCOPE DEFINITION

```
Spec ID: ARC-LICENSE-SCOPE-2026-09-02
Version: v1.3.0-exec | STATUS: ACTIVE (FROZEN)
Target Substrate: Phase 7 Hardware Baseline (ARC-SPEC-2026-HWBL-07 REV-02)
Target Master Hash Anchor: A-77-DELTA-SHIELD-LOCKED
Patent Delta Reference: ARC-IP-PDR-2026-004
Security Invariant: FAIL (POSIX 40) > FREEZE (POSIX 10) > PWC (POSIX 10) > REFUSAL
(POSIX 32) > PASS (POSIX 0) | C_ops = 0
```

1. EXPLICIT BOUNDING OF GRANTED PERMISSIONS

The open-source software licenses (Dual MIT / Apache-2.0) and public documentation permissions (Creative Commons Attribution 4.0 International) included within downstream public reference repositories apply strictly and exclusively to the executable code, scripts, configurations, and documentation files contained explicitly within that local directory tree.

These public terms do NOT under any circumstances extend to, encompass, or govern:

1. Separately maintained or published upstream Arcstone core architectures, frameworks, or specifications (e.g., ARC-SPEC-2026-MSAB-01, ARC-RCD-SPEC-001, ARC-SPEC-2026-HWBL-07).
2. Confidential know-how, internal control-plane decision matrices, or non-public research artifacts (PHYS-01, 124,100-hour empirical corpus).
3. The private Patent Delta Record (PATENT_DELTA_RECORD.md / ARC-IP-PDR-2026-004), conversion addenda (ARC-PAT-2026-CONV-ADDENDUM-V2.1), or tracking logs.

2. DUAL-TRACK LICENSING ARCHITECTURE & PATH ROUTING

Access, integration, and downstream deployment are governed strictly across four operational paths:

PATH A: PUBLIC OPEN-SOURCE INFRASTRUCTURE

Repository Target: arcstone-continuity-core

License Terms: Permissive Dual MIT / Apache-2.0 License

Covered Scope: Sanitized JSON schemas, local connectors, interface descriptors.

=====
===== (PUBLIC RELEASE FIREWALL MEMBRANE)
=====

PATH B/C/D: SOVEREIGN ENTERPRISE & PHYSICAL SUBSTRATE

Owner: Arcstone Adaptive Science Systems, Inc. (Private Vault)

License Terms: Proprietary Enterprise & Defense Sovereign License

Covered Scope: Bare-metal C drivers (hwbl_nmi_lockout.c), eBPF kernel pre-filters (hwbl_ingress_filter.c), Admissibility Kernel (AAK) enclaves, heavy-ion calibration datasets (PHYS-01), orbital chassis controls, MaaS API gateways.

2.1 Path A Public Open Integration

Code under public downstream branches is made available under Dual MIT / Apache-2.0 terms. Downstream usage or modification under Path A does NOT confer canonical architectural authority. Downstream forks cannot alter or relax upstream invariants ($C_{ops} = 0$, $\tau_{override} \leq 11.99ms$, $S_{max} \leq 4096B$).

2.2 Path B/C/D Commercial, Institutional & Defense Sovereign IP

Bare-metal C drivers, eBPF kernel pre-filters, Admissibility Kernel (AAK) enclaves, and orbital chassis controls remain proprietary holdings of Arcstone Adaptive Science Systems, Inc.

Commercial spinouts and enterprise integrations must encapsulate operational code inside an isolated execution membrane that catches and strictly enforces perimeter POSIX status codes: FAIL (POSIX 40) > FREEZE (POSIX 10) > PWC (POSIX 10) > REFUSAL (POSIX 32) > PASS (POSIX 0)

3. RESERVATION OF PATENT RIGHTS & TITLE

NO PATENT RIGHTS, IMPLIED LICENSES, COVENANTS NOT TO SUE, OR ARCHITECTURAL AUTHORITY ARE GRANTED under public reference releases regarding any upstream proprietary inventions or pending patent applications held by Arcstone Adaptive Science Systems, Inc.

This reservation applies non-negotiably to:

- U.S. Provisional Patent Application Serial No. 63/980,937 (Admissible Computational Spine & Meta-QAD Stack).
- Non-Provisional Conversion Addendum ARC-PAT-2026-CONV-ADDENDUM-V2.1 (Claims 1 through 8).
- Patent Delta Record ARC-IP-PDR-2026-004 (PATENT_DELTA_RECORD.md).
- All subsequent divisional, continuation, continuation-in-part, and international (PCT) filings claiming priority to the February 2026 provisional filing boundary.

4. PUBLIC RELEASE FIREWALL & NO UNREVIEWED UPSTREAM MATERIAL RULE

Material originating in, adapted from, or revealing private upstream Arcstone architectural components is structurally barred from entry into public downstream repositories unless cleared by an intentional Public Release Firewall audit. Downstream inclusion of reference computational realizations does not weaken upstream patent claims or expand public licensing boundaries.

5. INVARIANT COMPLIANCE & REVOCATION

Downstream applications interacting with this codebase must honor the Dominance Lattice ordering and drop synchronous execution context ($C_{ops} = 0$) immediately upon encountering a perimeter execution membrane FREEZE (POSIX 10) or FAIL (POSIX 40) verdict. Any unauthorized attempt to weaken invariants or bypass AAC-CERT proof tokens triggers immediate license revocation.
